

Session 3

Q1. Declare variables for a Flipkart product: productName (as a string), price (float), and rating (double). Assign sample values and print each variable with its data type.

Ans: task1.cpp

Q2. Create a constant variable to store the GST rate (for example, 18%) and use it to calculate the final price of a Zomato order with a given base price.

Ans: task2.cpp

Q3. Write a program that stores your favorite Spotify playlist's name (string), total number of songs (int), and average song duration in minutes (float). Print all values in a single formatted sentence.

Ans: task3.cpp

Q4. Identify and correct the invalid variable names from this list: 1stPlayer, player_age, \$score, total-marks, userName.

Ans: 1. **1stPlayer** – **Invalid** (variable names cannot start with a number)

Correct: firstPlayer or player1

2. **player_age** – **Valid** (underscores are allowed)

3. **\$score** – **Invalid** (the \$ symbol is not allowed in C variable names)

Correct: score

4. **total-marks** – **Invalid** (hyphens - are not allowed because they are treated as the subtraction operator)

Correct: totalMarks or total_marks

5. **userName** – **Valid** (starts with a letter and uses only letters)
